

How to engage patients in the early stages

June 26th – 15h CET / 9am EST

Speakers

- Nick Hicks / Commutateur Online
- Carole Scrafton / Fibro Flutters
- Oleks Gorbenko/ Ipsen
- Oana Bernard-Poenaru / Servier
- Chi Pakarinen/ PFMD

Facilitators

- Carina Prelucan / PFMD
- (Merlin Williams / Executive Insights)

Workshop objectives and other ideas

By joining this virtual session, you will:

- hear about the almost final how-to guide for patient engagement in the early stages and how the feedback from last PEOF has influenced the final product
- get a chance to test the usability of the how-to guide to identify potential gaps and gather ideas for improvements.

Description

Join us in this workshop where we will present the practical how-to guide co-created by a multi-stakeholder group to help stakeholders engage with patients in the early research stages. The very first “prototype” of this how-to was presented in the previous PEOF (in September 2019) to gather first thoughts and ideas to include in the final guide.

This how-to guide has been structured in a way that it can be used as a tool that will guide you through the planning, preparation and organisation of patient engagement activities and setting up meaningful and long term partnerships.

Who should join?

- Researchers from all fields with an interest in early discovery and preclinical phases
- Patients and care partners interested to know more how to become involved in the early research
- Anyone who is interested in how to engage patients in a more systematic way in the early phases
